Learn how to play piano iphone app

The iPhone isn't so much a smartphone because it's an app phone. That's all the Home screen really is -- a gateway to apps. Tap an icon, start an app. But which apps should you start? Out of the nearly one million apps on the iPhone App Store which are the ones every new iPhone owner really needs to have? What are the ones that will best help you with your work, your hobbies, your responsibilities and your fun? Out of all the programs, what deserves your attention? What's the very best? In short -- this. Based on years of experience and numerous tests and comparisons, these are the apps and games we consider to have and recommend that you download now. These are the best apps for the iPhone. While the iPhone can't cure lepers or turn water into wine, it can help you do many other useful things, such as sharing high-resolution videos, diagnosing your own illnesses and even creating your own virtual life form! With Apple's iPhone App Store due to go online today, we decided to take a look at some of the more interesting third-party apps, apps and websites that have been developed to help make your iPhone an integral tool for both jobs and fun. For IT departments that want more control over how iPhones inter communicate with their networks, Azaleos has expanded its OneStop remote email monitoring services to the new 3G iPhone. Azaleos, a Seattle company that has traditionally provided email management for BlackBerry and Windows Mobile devices, uses Microsoft ActiveSync technology to bring mobile devices under the control of its OneStop service, a subscription offering that provides 24-hour monitoring, maintenance, and management. The OneStop service is part of Azaleos' OneServer package that deploys a dedicated device within an IT network that provides an active/passive, error-tolerant and clustered Exchange platform for corporate messages. Funambol's Open Source Wireless SyncFunambol, an open-source software development company that specializes in mobile application servers, is now providing a free open-source email sync application for the iPhone. Starting this week, iPhone users will be able to synchronize their personal information management (PIM) data for free through the company's myFUNAMBOL portal to popular email systems such as Gmail, Yahoo and AOL. Funambol's wireless sync platform, which is supported by advertising, is also available on Windows Mobile and Blackberry devices, and will soon also be available on Google Android devices. The software for the application can be downloaded directly from the myFUNAMBOL Website. For anyone tired of having their wallet or wallet overcrowded with business cards, 211me's paperless business cards could be just the ticket. 211me, which describes itself as a mobile mash-up company, users can find their own cards, flyers and promotions designed specifically for mobile phones So, companies can create digital business cards for their employees or design promotions that sent electronically to any mobile phone in the US. Any flyers and business cards can also be shared on social networking sites like Facebook and Friendster, the company says. Users can design their own content by uploading their photos to 211me's website, where they can then choose from a wide range of backgrounds and text styles. The concept behind RemindYou is remarkably simple - essentially, the goal is to make sure you never miss another appointment again. And how does it do that, you ask? Well, by syncing with iCal, Outlook, or Entourage and then overlaying a graphic of all your appointments over the iPhone start-up photo. So, instead of seeing a picture of Earth from space as your default start-up screen every time you unlock your iPhone, you'll see a list of all your appointments. RemindYou can be purchased from the iPhone 2.0 App Store for \$19.95 for a lifetime license. While the iPhone has revolutionized the way we navigate the web on mobile devices, it may initially pose problems for new users who aren't used to typing on such a compact space. Nuance is now working on bringing its voice recognition technology to the iPhone to drastically reduce the need for users to peck away at query keyboards. It works like this: you start applying the iPhone startup menu, you click on a talking button once the application is launched, you verbally tell the app you want to search for, and then click you stop. The program will then translate your words into text and perform an Internet search for you. You can watch demonstrations of the software, which is still a prototype and won't be ready for release until the fall, on Nuance's website. By now, everyone knows that the 3G iPhone will support Microsoft Exchange ActiveSync and Cisco IPSec VPN to give enterprise customers at least some assurances of security for sending and receiving corporate emails. However, the people at HyperOffice want to give you more. By logging into your individual HyperOffice account through your iPhone's Web browser, you will have access to apps like document management with online storage and comments, discussion groups, and shared documents, calendars, contacts, projects, and tasks. Since HyperOffice is a service, users don't need to download it from the AppStore and can access it exclusively through the company's website. The service is currently priced at \$7 per month per user, and can also work on all smartphones and BlackBerry devices. Is there anything more fun than developing your own strange creatures that evolve from single-celled organisms? OK, so it might not sound like everyone's cup of tea, but that doesn't mean everyone can't enjoy Tracks, the oddly addictive strategy game of Electronic Arts that will be one of the flagship games to make its way into the iPhone platform. As earlier this year the iPhone version of Tracks will give users touch-screen capabilities in designing their own own creatures, from their genesis as single cells to their ultimate evolution in intelligent, cooperative species. Using the MPEG-4 h.264 video codec standard and letting users upload videos of any length, mDialog is becoming a high-resolution version of YouTube. In addition to offering standard features such as being able to tune, rate, and comment on videos, mDialog also allows users to provide fully customizable recordings to get detailed responses and advice from their audiences in real time. Customized specifically for Apple TV and the iPhone as well as the general internet, mDialog offers users up to 1GB of free video storage, with monthly membership plans of \$4.99 for 8GB of storage, \$9.99 for 20GB of storage and \$24.99 for 50GB of storage. MDialog can be accessed through the web and cannot be purchased through the App Store. Checking out baseball scores on your iPhone is one thing; check out official game highlights is quite another. Jumping early on the 3G iPhone bandwagon, Major League Baseball has developed an application called MLB At Bat that will offer fans video highlights of games on their iPhones literally moments after they occurred. Currently, MLB plans to host MLB At Bat for an annual fee of \$4.99. The application will be available when the iPhone App Store launches on July 11. Pentaho, an open-source business intelligence applications developer, has developed an iPhone Web application that gives employees and management mobile access to important company data such as stock reports, financial statements, revenue statements and sales reports sorted by customers, areas, and product lines. A demonstration of Pentaho's open-source iPhone application, which specializes in delivering business intelligence data mining and analysis, can be seen on Pentaho's website. Over the past two years, Twitter has taken the online world by storm as a happy medium between blogging and text messages. By letting users post updates of up to 140 characters on their Twitter social network pages, Twitter has emerged as a popular way for people to provide real-time updates on their work and lives to their friends and colleagues. Twitterrific, an interface developed by software company Iconfactory, is specifically designed to provide Twitter capabilities for Mac users and has been available for prison-soaked iPhones since last year. It will officially come to the iPhone later this week. For fans of old-school eight-bit graphic games comes Bomberman Touch (see below) from legendary Japanese gaming company Hudson Soft. Bomberman tells the poignant story of a disgruntled bomb-making robot trying to escape his work at the factory by blowing up many things. To win the game, you have to lead Bomberman through several mazes while staring down fearful enemies who look like giant frowny-faced balloons. Like Pac-Man and Donkey Kong, Bomberman is a timeless which should make a successful transition to the iPhone world. Worried about over cough that seems won't go away? Worried about that bone rash that costs you at night? Fear not, because health information and benefits technology company A.D.A.M. has developed a web application that allows users to match their medical symptoms with assessments and potential treatments. In addition, the navigator lets users know when they can help themselves through self-care and whether they should consult a medical professional. The company says that its medical data and information provided from its medically reviewed and URAC-accredited Health Encyclopedia. If 8GB of iPhone storage is not enough for you, giving Syncplicity's online storage service a try. Syncplicity allows you to store up to 2GB worth of document, photo, music and video files for free and allows you to access it immediately on your iPhone from within the cloud. All you need to do to access your stored data is to sign in to Syncplicity's website and then browse your saved documents. Syncplicity currently offers 40GB of storage for \$9.99 per month (\$99.99 per year), and the company will add 100Mb to your account for each reference you provide. A fine tool for anyone looking to get into a round of golf on vacation or on a business trip, GolfFlyover can provide iPhone users with three-dimensional aircraft cards from more than 10,000 golf courses in their entirety from across the United States. By the end of the year, the Websiteprojects that it will have mapped every single golf course in the United States. All golf course information is provided free of charge, and no membership is required to view the cards. An oldie but goodie, AOL's Instant Messenger is one of the classic Web apps for chatting and keeping in touch with your friends. Let's say you want to bid online for a 1955 Gibson Les Paul Junior electric guitar, but you don't have the time to sit in front of a computer screen all day. Simple! Just wear to your iPhone and use eBay's native iPhone applications to get constant updates when that punk who calls itself Gritan62 has your bid covered. The eBay app is free and available at the App Store. Not wants to be left behind in the online media world, the AP has created a Mobile News Network to offer readers the latest headlines on politics, sports, business and entertainment. The AP iPhone app is free and available from the App Store. Although it sounds like an application developed specifically for stalkers, Loopt's social network mapping tool is actually a location-based app designed to let you see where your friends hang out in your area. Essentially, when someone on your personal buddy list is signed on Loopt through their BlackBerry, iPhone or other compatible wireless device, Loopt will track them for you on a map tailor-made for wireless devices. If you don't want to be found at a particular moment, of course, you can sign out of Loopt or change your privacy settings. Quick stop referral for all your drug-related Epocrates' drug database gives you information about drug uses, recommended dosages, prices, interactions with other drugs and potential adverse reactions. This is another application currently available in the App Store. This story, 20 Cool iPhone Apps was originally published by Network World.
